

AMENDMENT UNDER 37 C.F.R. § 1.111  
U.S. Patent Appln. No. 09/888,656

**IN THE ABSTRACT:**

**Please delete the present Abstract of the Disclosure and replace it with the following new Abstract of the Disclosure.**

The present invention provides a stator for a dynamo-electric machine and a method for manufacturing the same in which an amount of heating during joining (welding) may be reduced, and, an insulating coating of conductors may be prevented from damage. In a stator 2 for a dynamo-electric machine comprising a stator core 32 having a plurality of slots 35, and a stator winding installed in the slots 35 and comprising a plurality of conductors 33 including end portions 33a which are joined to each other to form joint portions 33e. The joint portions 33e comprise a metal 33g, 33f of a lower melting point than that of the conductors 33.
